

Notes  
SDT #2

- poll SDT for dates of March meeting (doodle poll)
- add section to report on work plan for coming 2 years
- establish a WFIRST EPO working group and have a telecon on EPO (Blackwood, Centrella, Cominsky)
- add appendix on maturing technology for Coronagraph
- add appendix on operating telescope colder, Baseline now if 270K. Future testing to test using telescope at 250K (240K test limit)
- use new smaller instrument layout
- study the ability to make an active loop for controlling the secondary mirror position (wavefront error)
- present GO program to COPAG
- add 1 pager for secondary science with the coronagraph
- have telecon on costing
- have future study of readout rate. Current rate is one per 5.3 s for 32 channel readout
- have discussion in report on overlap of high latitude survey with LSST portion of sky
- add section on joint JWST - WFIRST observations (synergy)
- baseline IFU for SN spectroscopy and grism for galaxy redshift survey
